

A data record-structured file in the DP authoring system can be addressed only if the page files assigned to its data records are already stored in the data server device. A page file is transmitted only if it is not yet stored or a change has been made to its information content, in particular of link control addresses.

The stored page files are displayed in the DP user systems with navigation control fields which allow leafing through the group of page files to the logically next or preceding page file while avoiding activation of corresponding forward functions of a page access device.--

On page 2, please delete lines 25-29, and insert the following heading and paragraph:

--BRIEF DESCRIPTION OF THE DRAWINGS

The features of the present invention which are believed to be novel, are set forth with particularity in the appended claims. The invention, together with further objects and advantages, may best be understood by reference to the following description taken in conjunction with the accompanying drawings, in the several Figures of which like reference numerals identify like elements, and in which:--

On page 2, line 32, after "device" please insert --;--.

On page 3, line 3, after "device" please insert --;--.

On page 3, line 5, after "author file" please insert --; and--.

On page 3, in line 9, please insert --**DESCRIPTION OF THE PREFERRED EMBODIMENTS--**.

On page 11, after line 18, please insert the following paragraph:

--The invention is not limited to the particular details of the method depicted and other modifications and applications are contemplated. Certain other changes may be made in the above described method without
